

Abstract

An information processing method for an information processing apparatus which makes connection to a network to which at least a client apparatus and a printer are connected causes a computer to execute: a printer management step of managing information on the printer; a printer driver management step of managing a printer driver for the printer for which the information is managed; a client management step of managing the client apparatus; and an install step of installing the printer driver in the client apparatus which has issued an install request for the printer driver.
